

A Future Muon Collider at Fermilab

The whole accelerator chain, sized to the existing 27 km² campus — its final synchrotron a 14.5 km ring that fits.

Machine parameters: IMCC Tentative Parameter List, 30 Oct 2023 (10 TeV option); the final synchrotron is sized to the site at 14.5 km rather than the 35 km reference, which needs more acceleration turns. Siting indicative, not an engineering study.
